

the ultimate in quartz surfaces

# Product Information

TrendStone Quartz™ is an engineered stone manufactured from up to 93% quartz and the balance made from polymer resins and pigments. Quartz is one of the hardest natural stones on earth, making TrendStone Quartz™ a naturally strong and non-porous product.

Super size engineered quartz slabs **3200mm x 1600mm**

### **Scratch and Stain Resistance**

TrendStone Quartz™ comprises of up to 93% natural quartz which is one of the hardest natural materials on earth. This natural material makes TrendStone Quartz™ very durable, as well as non-porous, scratch and stain resistant.

### **Impact and Flexural Strength**

TrendStone Quartz™ has significantly more flexural strength than other benchtop surfaces making it less susceptible to chipping and cracking. The non-porous nature of TrendStone Quartz™ means it is a low maintenance product.

### **Experience and Professionalism**

TrendStone Quartz™ is available through a network of experienced stone fabricators.

### **Heat Resistance**

TrendStone Quartz™ will withstand limited exposure to heat without burning. However, you must never place crock pot and electric skillet items directly on any benchtop, including TrendStone Quartz™, especially near the edges and joins. Always use trivets when placing hot items on any natural stone or quartz surface to avoid thermal shock.

### **Reliability**

TrendStone Quartz™ slabs are manufactured using precision machinery and quality control processes delivering you a reliable product for performance, colour consistency and durability. TrendStone Quartz™ has a limited 10 year manufacturer's warranty.

### **Cleaning & Maintenance**

Avoid the regular use of commercial/supermarket counter-top cleaners/sealers, e.g. Windex, Spray & Wipe etc. on Stone surfaces. These types of cleaners may affect the stone surface and cause white/light colours to yellow over time. Only use pH neutral cleaners. Alternatively, another simple stone safe everyday cleaner is Methylated spirits (not dyed), diluted with water in a spray bottle (approx. 70% metho / 30% water). Spray over the surface and dry off with absorbent paper towel or microfibre cloth. For more stubborn marks try warm water and a very small amount of detergent. We highly recommend the use of "Stone Foam" for occasional cleaning of stubborn marks or grime build up. Always rinse surfaces with water and dry surfaces fully to remove detergent/cleaning residues from the surface.
